Deliverable 6 Acceptance Testing

Potential testing questions for each of the two project applications:

Tennis Club Member Application

- Does the system prevent users from scheduling courts during closed hours?
- Does the system place more than one guest fee on a member's balance when they bring more than one guest to a single reservation?
- Does the system immediately remove a reservation from the database upon cancellation?
- Does the system allow users the option not to appear in the member directory?
- Does the system give appropriate reminders for payment/cancellation deadlines?

Card Sorter

- Does the system identify different versions/printings of the same card as their appropriate values instead of the same?
- Does the system utilize the most recent market value for cards when sorting by value?
- Does the system process the minimum amount of data to identify a card rather than scanning all of its graphic data?
- Does the system's output speed compare to that of similar/competitor products?
- Does the system's GUI provide access to all functional requirements?
